Certificate of Media Sanitisation

Hiscox Media Limited — ASTRID Media Services · certificate ASTRID-SAMPLE-0001-1

Media identity (read from the device)

Media type	SD / microSD flash memory card
CID serial number	0x1a2b3c4d
Make / product	SanDisk/WD SC128 rev 3.0
Controller (CID identity)	SanDisk/WD — MID 0x03 / OID SD
Manufactured	2023-05
Capacity (measured)	128,000,000,000 bytes

Condition at intake

Remaining endurance	96.0% (vendor health register, rated 3000 P/E cycles)
Average erase count	118
Projected service life	10+ years at current duty (wear rate vs manufacture date — conservative bound)

Sanitisation performed

Method — level achieved	NIST SP 800-88 Rev.1 — PURGE
Technique	Media-level hardware erase issued to the card's own controller (SD CMD32/33/38, full user area). Reaches all physical blocks including remapped/spare areas that overwriting cannot address.
Erase duration	0.0 s
Post-erase verification	read-back sampling: —/32 regions confirmed blank
Endurance before → after	96.0% → 96.0% remaining life · erase count 118 → 119 — the counter movement is the card's own silicon corroborating the erase
Handed back as	Uninitialised (raw, verified blank)

Attestation

The sanitisation level stated above is the level ACHIEVED and verified on this specific device, not merely attempted: the post-erase state was read back from the media, and the card's own wear registers corroborate the erase where the silicon exposes them. Processed on the ASTRID automated sanitisation line.

Batch / job reference	SAMPLE-0001
Position in batch	1
Processed (UTC)	2026-09-05T08:41:57
Certificate issued	2026-09-05 08:41 UTC
Evidence integrity ref	sha256:e6f9666d9dc46098fb93e919c866bd44…

This certificate is generated from, and verifiable against, the per-step evidence record retained by ASTRID Media Services.
